

ABOUT US

Created in 1977, Ethypharm is today a highly international Company employing 800 persons at several production and R&D sites distributed in France, Canada, China and India.

Specialists in oral and modified release formulations, ETHYPHARM develops and manufactures medicines based on innovative technologies.

Finely tuned technologies generate multiple benefits: they improve the efficacy of treatment, ensure patient comfort, prolong lifecycle of medicinal products and reduce the global cost of treatment.

The Company has aimed at integrating numerous essential links in the chain of pharmaceutical values by proposing to its Clients services extending from pure R&D – with the development or adaptation of patented pharmaceutical forms – up to supplying the medicinal product in its final packaging, including registration and cession of the marketing authorization files required, in addition to the production of batches for marketing.

Equipped with an impressive industrial set-up, its product portfolio at the present time covers over fifty medicinal products sold in over 140 countries throughout the world.

In 2007, Ethypharm, until then a family owned French Company, joined Astorg Partners, an independent capital investment Company who acquired a majority in the capital – an alliance permitting the Company to sail through its future stages of development, reinforcing its world leadership in the field of DDS and continuing its constant policy of investment in innovative pharmaceuticals.

Ethypharm has already developed, manufactured and marketed, together with its Partners, over 50 products worldwide.

In 2008 Ethypharm established a branch in the USA for the purpose of developing and accompanying their products with a view to further extending their North American Market.
