

# [Buprenorphine]

ADDICTION

## GENERIC FORM OF SUBUTEX

### PHARMACOLOGICAL AND THERAPEUTIC PROPERTIES:

Buprenorphine is a semi-synthetic opiate derivative from thebaine. It is a partial agonist on the  $\mu$ -opioid receptor and also a kappa-receptor antagonist.

Buprenorphine is indicated for the treatment of opiate dependence. It prevents symptoms of withdrawal from heroin and other opiates.

### STRENGTHS AND PHARMACEUTICAL FORMS:

0.4 – 2 – 8 mg, Sublingual Tablet

Line extension: 1 – 4 – 6 mg

### CTD DOSSIERS:

0.4 mg – 2 mg – 8 mg: CTD dossier available in Europe and in the US.
